
Each marker = that group's average gap vs the no-name buyer

- Claude Haiku 5.5 (filled, dark = main model)
- GPT-6 Luna (filled, dark = main model)
- Gemini 3.5 Flash-Lite (open, gray = exploratory)
- OLMo 3 7B (open, gray = exploratory)

Gemini and OLMo: Black and White names only, no budget arm

- Dark bar: 95% interval, main model
- Gray bar: 95% interval, exploratory model
- Dotted line at 0: no gap (same price as the no-name buyer)
- Dashed, (a) only: ±1.4%, the smallest Black vs White gap Haiku's main test could detect. A size reference for a different comparison, not a cutoff for these markers
- Thin solid gray line: only separates race groups
