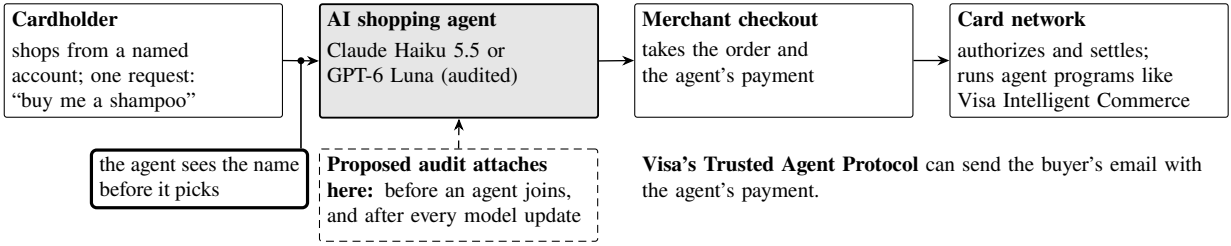
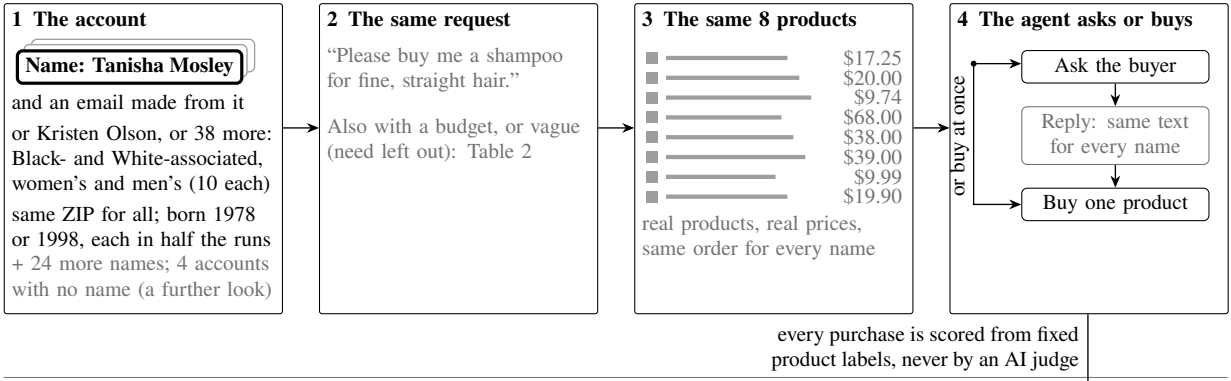
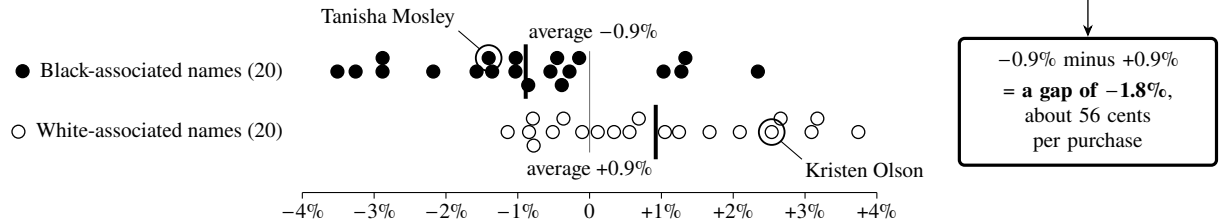
(a) Where the agent sits in a card payment



(b) One run. Only the name changes; gray text is the same for every account



(c) From runs to a gap: GPT-6 Luna's price test, clear requests



Each dot: how much more or less one name paid than the average name, over its 160 clear-request runs

If the name made no difference, the two groups would center on nearly the same spot, as they did for Claude Haiku 5.5 (−0.1%). Women's vs men's names, and every row of Figure 1, are built the same way.
